

## HOMEWORK 5

### Q1

#### A. $\text{Smoke} \Rightarrow \text{Smoke}$

Smoke	$(\text{Smoke} \Rightarrow \text{Smoke}) \equiv (\neg \text{Smoke} \vee \text{Smoke})$
F	T
T	T

**VALID** because satisfied by all models

#### B. $\text{Smoke} \Rightarrow \text{Fire}$

Smoke	Fire	$(\text{Smoke} \Rightarrow \text{Fire}) \equiv (\neg \text{Fire} \Rightarrow \neg \text{Smoke})$
F	F	T
F	T	T
T	F	F
T	T	T

**NEITHER** because satisfied by some, not all and not none of the models

#### C. $\text{Smoke} \vee \text{Fire} \vee \neg \text{Fire}$

Fire	Smoke	$(\text{Smoke} \vee \text{Fire} \vee \neg \text{Fire}) \equiv (\text{Smoke} \vee \text{True}) \equiv \text{True}$
F	F	T
F	T	T
T	F	T
T	T	T

**VALID** because satisfied by all models

#### D. $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow (\neg \text{Smoke} \Rightarrow \neg \text{Fire})$

$\neg(\text{Smoke} \Rightarrow \text{Fire}) \vee (\neg \text{Smoke} \Rightarrow \neg \text{Fire})$	Implication elimination
$\neg(\neg \text{Smoke} \vee \text{Fire}) \vee (\neg \text{Smoke} \Rightarrow \neg \text{Fire})$	Implication elimination
$(\text{Smoke} \wedge \neg \text{Fire}) \vee (\neg \text{Smoke} \Rightarrow \neg \text{Fire})$	De Morgan
$(\text{Smoke} \wedge \neg \text{Fire}) \vee (\text{Smoke} \vee \neg \text{Fire})$	Implication elimination

Fire	Smoke	$((\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow (\neg \text{Smoke} \Rightarrow \neg \text{Fire}))$ $\equiv ((\text{Smoke} \wedge \neg \text{Fire}) \vee (\text{Smoke} \vee \neg \text{Fire}))$
F	F	T
F	T	T
T	F	F
T	T	T

**NEITHER** because satisfied by some, not all and not none of the models

E.  $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow ((\text{Smoke} \vee \text{Heat}) \Rightarrow \text{Fire})$   
 $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow (\neg(\text{Smoke} \vee \text{Heat}) \vee \text{Fire})$   
 $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow (\text{Fire} \vee (\neg \text{Smoke} \wedge \neg \text{Heat}))$   
 $(\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow ((\text{Fire} \vee \neg \text{Smoke}) \wedge (\text{Fire} \vee \neg \text{Heat}))$   
 $(\neg \text{Smoke} \vee \text{Fire}) \Rightarrow ((\text{Fire} \vee \neg \text{Smoke}) \wedge (\text{Fire} \vee \neg \text{Heat}))$   
 $\neg(\neg \text{Smoke} \vee \text{Fire}) \vee ((\text{Fire} \vee \neg \text{Smoke}) \wedge (\text{Fire} \vee \neg \text{Heat}))$   
 $(\neg \text{Fire} \wedge \text{Smoke}) \vee ((\text{Fire} \vee \neg \text{Smoke}) \wedge (\text{Fire} \vee \neg \text{Heat}))$

Smoke	Fire	Heat	$((\text{Smoke} \Rightarrow \text{Fire}) \Rightarrow (\neg \text{Smoke} \Rightarrow \neg \text{Fire}))$ $\equiv (\neg \text{Fire} \wedge \text{Smoke}) \vee ((\text{Fire} \vee \neg \text{Smoke}) \wedge (\text{Fire} \vee \neg \text{Heat}))$
F	F	F	T
F	F	T	F
F	T	F	T
F	T	T	T
T	F	F	T
T	F	T	T
T	T	F	T
T	T	T	T

**NEITHER** because satisfied by some, not all and not none of the models

F.  $((\text{Smoke} \wedge \text{Heat}) \Rightarrow \text{Fire}) \Leftrightarrow ((\text{Smoke} \Rightarrow \text{Fire}) \vee (\text{Heat} \Rightarrow \text{Fire}))$   
 $((\text{Smoke} \wedge \text{Heat}) \Rightarrow \text{Fire}) \Leftrightarrow ((\text{Smoke} \Rightarrow \text{Fire}) \vee (\text{Heat} \Rightarrow \text{Fire}))$   
 $(\neg(\text{Smoke} \wedge \text{Heat}) \vee \text{Fire}) \Leftrightarrow ((\neg \text{Smoke} \vee \neg \text{Heat}) \vee \text{Fire})$   
 $((\neg \text{Smoke} \vee \neg \text{Heat}) \vee \text{Fire}) \Leftrightarrow ((\neg \text{Smoke} \vee \text{Fire}) \vee (\neg \text{Heat} \vee \text{Fire}))$   
 $(\neg \text{Smoke} \vee \neg \text{Heat} \vee \text{Fire}) \Leftrightarrow (\neg \text{Smoke} \vee \text{Fire} \vee \neg \text{Heat} \vee \text{Fire})$

$(\neg \text{Smoke} \vee \neg \text{Heat} \vee \text{Fire}) \Leftrightarrow (\neg \text{Smoke} \vee \neg \text{Heat} \vee \text{Fire})$

Let  $(\neg \text{Smoke} \vee \neg \text{Heat} \vee \text{Fire})$  be A.

$(A \Rightarrow A) \wedge (A \Rightarrow A)$

$(\neg A \vee A) \wedge (\neg A \vee A)$

$(\text{True}) \wedge (\text{True})$

True

Smoke	Fire	Heat	$((\text{Smoke} \wedge \text{Heat}) \Rightarrow \text{Fire}) \Leftrightarrow ((\text{Smoke} \Rightarrow \text{Fire}) \vee (\text{Heat} \Rightarrow \text{Fire}))$
F	F	F	T
F	F	T	T
F	T	F	T
F	T	T	T
T	F	F	T
T	F	T	T
T	T	F	T
T	T	T	T

**VALID** because satisfied by all models

Q2

A.  $P(A, B, B), P(x, y, z)$

$\Theta = \{x/A, y/B, z/B\}$

B.  $Q(y, G(A, B)), Q(G(x, x), y)$

**No unifier exists** because I first bind  $y$  to  $G(A, B)$ , and to make  $y$  bind to  $G(x, x)$ ,  $x$  would have to bind to both  $A$  and  $B$  which is not possible.

C.  $\text{Older}(\text{Father}(y), y), \text{Older}(\text{Father}(x), \text{John})$

$\Theta = \{y/\text{John}, x/\text{John}\}$

D.  $\text{Knows}(\text{Father}(y), y), \text{Knows}(x, x)$ .

**No unifier exists** because to unify these two sentences, we would have to bind  $x$  to both  $\text{Father}(y)$  and  $y$  which is not possible.

Q3

A. Translate these sentences into formulas in first-order logic.

John likes all kinds of food.	$\forall x \text{ Food}(x) \Rightarrow \text{Likes}(\text{John}, x)$
Apples are food.	$\text{Food}(\text{Apples})$
Chicken is food.	$\text{Food}(\text{Chicken})$
Anything anyone eats and isn't killed by is food.	$\forall x (\exists y \text{ Eats}(y,x) \wedge \neg \text{KilledBy}(y,x)) \Rightarrow \text{Food}(x)$
If you are killed by something, you are not alive.	$\forall x (\exists y \text{ KilledBy}(y,x)) \Rightarrow \neg \text{Alive}(y)$
Bill eats peanuts and is still alive.*	$\text{Eats}(\text{Bill}, \text{Peanuts}) \wedge \neg \text{KilledBy}(\text{Bill}, \text{Peanuts})$
Sue eats everything Bill eats.	$\forall x (\text{Eats}(\text{Bill}, x) \Rightarrow \text{Eats}(\text{Sue}, x))$

B. Convert the formulas of part (a) into CNF (also called clausal form).

R1	$\forall x \text{ Food}(x) \Rightarrow \text{Likes}(\text{John}, x)$	$\neg \text{Food}(x) \vee \text{Likes}(\text{John}, x)$
R2	$\text{Food}(\text{Apples})$	$\text{Food}(\text{Apples})$
R3	$\text{Food}(\text{Chicken})$	$\text{Food}(\text{Chicken})$
R4	$\forall x (\exists y \text{ Eats}(y,x) \wedge \neg \text{KilledBy}(y,x)) \Rightarrow \text{Food}(x)$	$\neg \text{Eats}(y,x) \vee \text{KilledBy}(y,x) \vee \text{Food}(x)$
R5	$\forall x (\exists y \text{ KilledBy}(y,x)) \Rightarrow \neg \text{Alive}(y)$	$\neg \text{KilledBy}(y,x) \vee \text{Alive}(y)$
R6	$\text{Eats}(\text{Bill}, \text{Peanuts}) \wedge \neg \text{KilledBy}(\text{Bill}, \text{Peanuts})$	$\text{Eats}(\text{Bill}, \text{Peanuts})$
R7		$\neg \text{KilledBy}(\text{Bill}, \text{Peanuts})$
R8	$\forall x (\text{Eats}(\text{Bill}, x) \Rightarrow \text{Eats}(\text{Sue}, x))$	$\neg \text{Eats}(\text{Bill}, x) \vee \text{Eats}(\text{Sue}, x)$

C. Prove that John likes peanuts using resolution.

Conclusion:  $\text{Likes}(\text{John}, \text{Peanuts})$

Prove by contradiction by showing that  $\neg \text{Likes}(\text{John}, \text{Peanuts})$  is unsatisfiable.

R9	Negate conclusion	$\neg \text{Likes}(\text{John}, \text{Peanuts})$
R10	R1 and R8, $\{x/\text{Peanuts}\}$	$\neg \text{Food}(\text{Peanuts})$
R11	R10 and R4, $\{x/\text{Peanuts}\}$	$\neg \text{Eats}(y, \text{Peanuts}) \vee \text{KilledBy}(y, \text{Peanuts})$
R12	R11 and R6, $\{y/\text{Bill}\}$	$\text{KilledBy}(\text{Bill}, \text{Peanuts})$
R13	R12 and R7, $\{\}$	$\perp$

Therefore, we conclude  $\text{Likes}(\text{John}, \text{Peanuts})$ .

D. Use resolution to answer the question, “What food does Sue eat?”

Prove by contradiction by showing that  $\neg \text{Eats}(\text{Sue}, \text{Peanuts})$  is unsatisfiable.

R14	Negate conclusion	$\neg \text{Eats}(\text{Sue}, \text{Peanuts})$
R15	R8 and R14, $\{x/\text{Peanuts}\}$	$\neg \text{Eats}(\text{Bill}, \text{Peanuts})$
R16	R6 and R15, $\{x/\text{Peanuts}\}$	$\perp$

Therefore, we conclude ***Eats(Sue, Peanuts)***.

E. Use resolution to answer the question, “What food does Sue eat?” if, instead of the axiom marked with an asterisk above, we had: (1) If you don’t eat, you die. (2) If you die, you are not alive. (3) Bill is alive.

Convert new statements to CNF:

If you don’t eat, you die	$\forall x (\forall y \neg \text{Eat}(y, x) \Rightarrow \text{Dies}(y))$	$\text{Eat}(y, x) \vee \text{Dies}(y)$
If you die, you are not alive	$\forall y \text{Dies}(y) \Rightarrow \neg \text{Alive}(y)$	$\neg \text{Dies}(y) \vee \neg \text{Alive}(y)$
Bill is alive.	$\text{Alive}(\text{Bill})$	$\text{Alive}(\text{Bill})$

New Knowledge Base:

R1	$\forall x \text{Food}(x) \Rightarrow \text{Likes}(\text{John}, x)$	$\neg \text{Food}(x) \vee \text{Likes}(\text{John}, x)$
R2	$\text{Food}(\text{Apples})$	$\text{Food}(\text{Apples})$
R3	$\text{Food}(\text{Chicken})$	$\text{Food}(\text{Chicken})$
R4	$\forall x (\exists y \text{Eats}(y, x) \wedge \neg \text{KilledBy}(y, x)) \Rightarrow \text{Food}(x)$	$\neg \text{Eats}(y, x) \vee \text{KilledBy}(y, x) \vee \text{Food}(x)$
R5	$\forall x (\exists y \text{KilledBy}(y, x)) \Rightarrow \neg \text{Alive}(y)$	$\neg \text{KilledBy}(y, x) \vee \text{Alive}(y)$
R6	$\forall x (\text{Eats}(\text{Bill}, x) \Rightarrow \text{Eats}(\text{Sue}, x))$	$\neg \text{Eats}(\text{Bill}, x) \vee \text{Eats}(\text{Sue}, x)$
R7	$\forall x (\forall y \neg \text{Eat}(y, x) \Rightarrow \text{Dies}(y))$	$\text{Eat}(y, x) \vee \text{Dies}(y)$
R8	$\forall y \text{Dies}(y) \Rightarrow \neg \text{Alive}(y)$	$\neg \text{Dies}(y) \vee \neg \text{Alive}(y)$
R9	$\text{Alive}(\text{Bill})$	$\text{Alive}(\text{Bill})$

Resolution to answer “What does Sue eat?”

R10	Negate conclusion	$\neg \text{Eats}(\text{Sue}, \text{Apples})$
R11	R10 and R7, $\{x/\text{Apples}\}$	$\text{Dies}(\text{Sue})$
R12	R11 and R8, $\{y/\text{Sue}\}$	$\neg \text{Alive}(\text{Sue})$
R13	R9 and R5, $\{y/\text{Bill}\}$	$\neg \text{KilledBy}(\text{Bill}, x)$
R14	R10 and R6, $\{x/\text{Apples}\}$	$\neg \text{Eats}(\text{Bill}, \text{Apples})$

R15	R14 and R7, {y/Bill}, {x/Apples}	<b>Dies(Bill)</b>
R16	R15 and R8, {y/Bill}	<b><math>\neg</math>Alive(Bill)</b>
R17	R16 and R9	<b><math>\perp</math></b>

Therefore, we conclude ***Eats(Sue,Apples)***.

## Q4

A. Represent the above information using a propositional logic knowledge base (set of sentences in propositional logic).

If the unicorn is mythical, then it is immortal	<b>Mythical(x) <math>\Rightarrow</math> Immortal(x)</b>
If it is not mythical, then it is a mortal mammal	<b><math>\neg</math>Mythical(x) <math>\Rightarrow</math> (<math>\neg</math>Immortal(x) <math>\wedge</math> Mammal(x))</b>
If the unicorn is either immortal or a mammal, then it is horned	<b>(Immortal(x) <math>\vee</math> Mammal(x)) <math>\Rightarrow</math> Horned(x)</b>
The unicorn is magical if it is horned.	<b>Horned(x) <math>\Rightarrow</math> Magical(x)</b>

$\Rightarrow \vee \neg \wedge$

B. Convert the knowledge base into CNF

R1	Mythical(x) $\Rightarrow$ Immortal(x)	<b><math>\neg</math>Mythical(x) <math>\vee</math> Immortal(x)</b>
R2	$\neg$ Mythical(x) $\Rightarrow$ ( $\neg$ Immortal(x) $\wedge$ Mammal(x))	Mythical(x) $\vee$ ( $\neg$ Immortal(x) $\wedge$ Mammal(x)) <b>(Mythical(x) <math>\vee</math> <math>\neg</math>Immortal(x)) <math>\wedge</math> (Mythical(x) <math>\vee</math> Mammal(x))</b>
R3	(Immortal(x) $\vee$ Mammal(x)) $\Rightarrow$ Horned(x)	$\neg$ (Immortal(x) $\vee$ Mammal(x)) $\vee$ Horned(x) Horned(x) $\vee$ ( $\neg$ Immortal(x) $\wedge$ $\neg$ Mammal(x)) <b>(Horned(x) <math>\vee</math> <math>\neg</math>Immortal(x)) <math>\wedge</math> (Horned(x) <math>\vee</math> <math>\neg</math>Mammal(x))</b>
R4	Horned(x) $\Rightarrow$ Magical(x)	<b><math>\neg</math>Horned(x) <math>\vee</math> Magical(x)</b>

C. Can you use the knowledge base to prove that the unicorn is mythical? How about magical? Horned?

Prove that unicorn is mythical by contradiction of  $\neg$ Mythical(x)

R5	Negation	<b><math>\neg</math>Mythical(x)</b>
R6	R5 and R1	<b>Immortal(x)</b>
R7	R6 and R2	Immortal(x) $\vee$ Mythical(x) $\vee$ ( $\neg$ Immortal(x) $\wedge$ Mammal(x)) Mythical(x) $\vee$ ((Immortal(x) $\vee$ $\neg$ Immortal(x)) $\wedge$ (Immortal(x) $\vee$ Mammal(x))) Mythical(x) $\vee$ Immortal(x) $\vee$ Mammal(x)
R8	R7 and R5	Immortal(x) $\vee$ Mammal(x)

**Cannot prove that unicorn is Mythical.**

Prove that unicorn is magical by contradiction of  $\neg$ Magical(x), with same original KB from R1 to R4.

R5	Negation	<b><math>\neg</math>Magical(x)</b>
----	----------	------------------------------------

R6	R5 and R4	<b><math>\neg \text{Horned}(x)</math></b>
R7	R6 and R3	<b><math>\neg(\text{Immortal}(x) \vee \text{Mammal}(x))</math></b>
R8	R7 and R2	$\text{Mythical}(x) \vee ((\neg \text{Immortal}(x) \wedge \text{Mammal}(x)) \vee \neg(\text{Immortal}(x) \vee \text{Mammal}(x)))$ $\text{Mythical}(x) \vee ((\neg \text{Immortal}(x) \wedge \text{Mammal}(x)) \vee (\neg \text{Immortal}(x) \wedge \neg \text{Mammal}(x)))$ $\text{Mythical}(x) \vee (\neg \text{Immortal}(x) \wedge (\text{Mammal}(x) \vee \neg \text{Mammal}(x)))$ <b><math>\text{Mythical}(x) \vee \neg \text{Immortal}(x)</math></b>
R9	R8 and R1	$\text{Mythical}(x) \vee \neg \text{Immortal}(x) \vee \neg \text{Mythical}(x) \vee \text{Immortal}(x)$ <b>Empty</b>

Therefore, we conclude **Magical(x)**.

Prove that unicorn is horned by contradiction of  $\neg \text{Horned}(x)$ , with same original KB from R1 to R4.

R5	Negation	<b><math>\neg \text{Horned}(x)</math></b>
R6	R5 and R3	<b><math>\neg(\text{Immortal}(x) \vee \text{Mammal}(x))</math></b>
R7	R6 and R2	$\text{Mythical}(x) \vee ((\neg \text{Immortal}(x) \wedge \text{Mammal}(x)) \vee \neg(\text{Immortal}(x) \vee \text{Mammal}(x)))$ $\text{Mythical}(x) \vee ((\neg \text{Immortal}(x) \wedge \text{Mammal}(x)) \vee (\neg \text{Immortal}(x) \wedge \neg \text{Mammal}(x)))$ $\text{Mythical}(x) \vee (\neg \text{Immortal}(x) \wedge (\text{Mammal}(x) \vee \neg \text{Mammal}(x)))$ <b><math>\text{Mythical}(x) \vee \neg \text{Immortal}(x)</math></b>
R8	R7 and R1	$\text{Mythical}(x) \vee \neg \text{Immortal}(x) \vee \neg \text{Mythical}(x) \vee \text{Immortal}(x)$ <b>Empty</b>

Therefore, we conclude **Horned(x)**.

Q5

Prove each of the following assertions:

A.  $\alpha$  is valid if and only if  $\text{True} \models \alpha$ .

True is true in all models, and since  $\alpha$  is valid in all models that True is true,  $\alpha$  is also true in all models, which is the definition of valid. Therefore,  $\alpha$  is valid.

B. For any  $\alpha$ ,  $\text{False} \models \alpha$ .

False is true in no models, so the set of models in which False is true is the empty set.  $\alpha$  is true in all models of the empty set, which is a vacuous truth.

C.  $\alpha \models \beta$  if and only if the sentence  $(\alpha \Rightarrow \beta)$  is valid.

We must prove in that (1) if  $(\alpha \models \beta)$ , then  $(\alpha \Rightarrow \beta)$  and (2) if  $(\alpha \Rightarrow \beta)$ , then  $(\alpha \models \beta)$

(1) To prove that if  $\alpha \models \beta$ , then  $\alpha \Rightarrow \beta$ :  $\alpha \models \beta$  means that in models in which  $\alpha$  is true,  $\beta$  is true. So, in models in which  $\alpha$  is true,  $\alpha \Rightarrow \beta$  holds because both  $\alpha$  and  $\beta$  are true. In models in which  $\alpha$  is false,  $\alpha \Rightarrow \beta$  also holds because there cannot exist the counterexample of  $\alpha \Rightarrow \neg\beta$  because  $\alpha$  is false in the first place.

(2) To prove that if  $\alpha \Rightarrow \beta$ , then  $\alpha \models \beta$ :  $\alpha \Rightarrow \beta$  means that if  $\alpha$  is true, then  $\beta$  is also true, and if  $\alpha$  is false, then  $\beta$  is false. This fits the definition of entailment, that in every model in which  $\alpha$  is true,  $\beta$  is also true.

D.  $\alpha \models \beta$  if and only if the sentence  $\alpha \wedge \neg\beta$  is unsatisfiable.

We must prove that (1) if  $\alpha \models \beta$ , then  $\alpha \wedge \neg\beta$  is unsatisfiable and (2) if  $\alpha \wedge \neg\beta$  is unsatisfiable, then  $\alpha \models \beta$ .

(1) To prove that if  $\alpha \models \beta$ , then  $\alpha \wedge \neg\beta$  is unsatisfiable: Entailment  $\alpha \models \beta$  means that in every model in which  $\alpha$  is true,  $\beta$  is also true. There cannot exist a model such that  $\alpha$  is true and  $\beta$  is not true, which is described by  $\alpha \wedge \neg\beta$ , so this statement is unsatisfiable.

(2) To prove that if  $\alpha \wedge \neg\beta$  is unsatisfiable, then  $\alpha \models \beta$ : Unsatisfiability of  $\alpha \wedge \neg\beta$  means that there exists no model in which  $\alpha$  is true and  $\beta$  is false, which means that in every model in which  $\alpha$  is true,  $\beta$  is also true. There can exist only models in which  $\alpha$  is true and  $\beta$  is true and models in which  $\alpha$  is false and  $\beta$  is false. This is the definition of entailment:  $\alpha \models \beta$ .
